

FLOTATION CAPABILITIES

Leveraging the expertise and knowledge of a long-standing heritage engineering business in the mining centre of Kalgoorlie, Mintrex founder Tom Kendall and Technical Manager, Hien Ngo initially provided client representative services overseeing the design of Western Mining Corporation's (WMC) Kambalda Nickel Concentrator utilising a flash flotation circuit, from 1993 to 1998. The experience and knowledge gained in flotation during this project has been valuable to many of Mintrex's clients since and our current team has been privileged to contribute to the success of more recent projects including those highlighted below.:

Showcase Projects

- **SANDFIRE RESOURCES NL:** The DeGrussa Copper, WA, 1.5 Mtpa Copper Definitive Feasibility Study (DFS) was successfully completed by Mintrex in 2011 (Mintrex also completed the Scoping and Pre-feasibility Studies). As a result of the quality of the DFS, engineering support services awarded to and successfully completed by Mintrex included compiling the EPC contract, engineering data sheets for all capital equipment, procurement and early earthworks design. Mintrex added value by helping to maximise Sandfire's return on equity.

"Mintrex carried out the work with enthusiasm and always acted professionally. They were able to complete all tasks in a timely manner and cost effectively. I would have no hesitation in working with Mintrex in a similar role again."

Martin Reed, former Project Manager (DeGrussa Project)

- **LYNAS CORPORATION:** The Mt Weld, WA, 0.25 Mtpa Rare Earths Project Construction Management project was completed by Mintrex in 2010. Engineering services provided included client representation (approval and design sign-off), operational readiness and commissioning. Mintrex was able to reduce Lynas' capital risk by providing the expertise and guidance as needed throughout the construction. Subsequently in 2011 Mintrex completed the DFS for the Mt Weld Upgrade.
- **EMERALD RESOURCES LIMITED:** The Okvau Gold Project, Cambodia, 2 Mtpa Definitive Feasibility Study is completed by Mintrex (2017). The project includes the design of a rougher flotation circuit and regrinding circuit.
- **EXPLAURUM LIMITED:** The Tampia Gold Project, WA, 1Mtpa Scoping Study was completed by Mintrex in 2016. The project includes the design of a gold flotation circuit as well as costing of such a circuit at scoping level.
- **HOT CHILI LIMITED:** The Productora, Chile, 14 Mtpa Copper Pre-feasibility Study (Copper oxide and sulphide circuits as well as Molybdenum Circuit) was completed by Mintrex in 2016. Mintrex' main tasks were the design and management of the metallurgical testwork programme for the copper sulphide and molybdenum flotation circuits as well as overall study management of the total project.
- **REDBANK COPPER:** The Redbank, NT, 0.2 Mtpa Copper Concentrator (flotation circuit) detail design was completed by Mintrex in 1990.
